2. The following is a statement of reasons for the indication of allowable subject matter:

Claim 76 recites, inter alia, “*a method of forming a land grid assembly (LGA) module, the method comprising: preparing a cap including sealing legs; at least one selectively adjustable protrusion intermediate the sealing legs and extend to a predetermined distance above a surface of the substrate when the module is sealed; and selectively adjusting a position of the at least one selectively adjustable protrusion in relation to the substrate until the substrate is just contacted by the at least one selectively adjustable protrusion, wherein during a load condition on the substrate, the at least one selectively adjustable protrusion suppresses an amount of flexing of the substrate*”; and in the combination with other claimed limitations.

Claim 113 recites, inter alia, “*a method of forming a land grid assembly (LGA) module, the method comprising: preparing a cap including sealing legs; at least one selectively adjustable protrusion intermediate the sealing legs and extend to a predetermined distance above a surface of the substrate when the module is sealed; and selectively adjusting a position of the at least one selectively adjustable protrusion in a direction toward to the substrate until the substrate is just contacted by the at least one selectively adjustable protrusion, then selectively adjusting a position of the at least one selective adjustable protrusion in a direction opposite to the substrate by a predetermined distance from the substrate, wherein during a load condition on the substrate, the at least one selectively adjustable protrusion suppresses an amount of flexing of the substrate*”; and in the combination with other claimed limitations.
